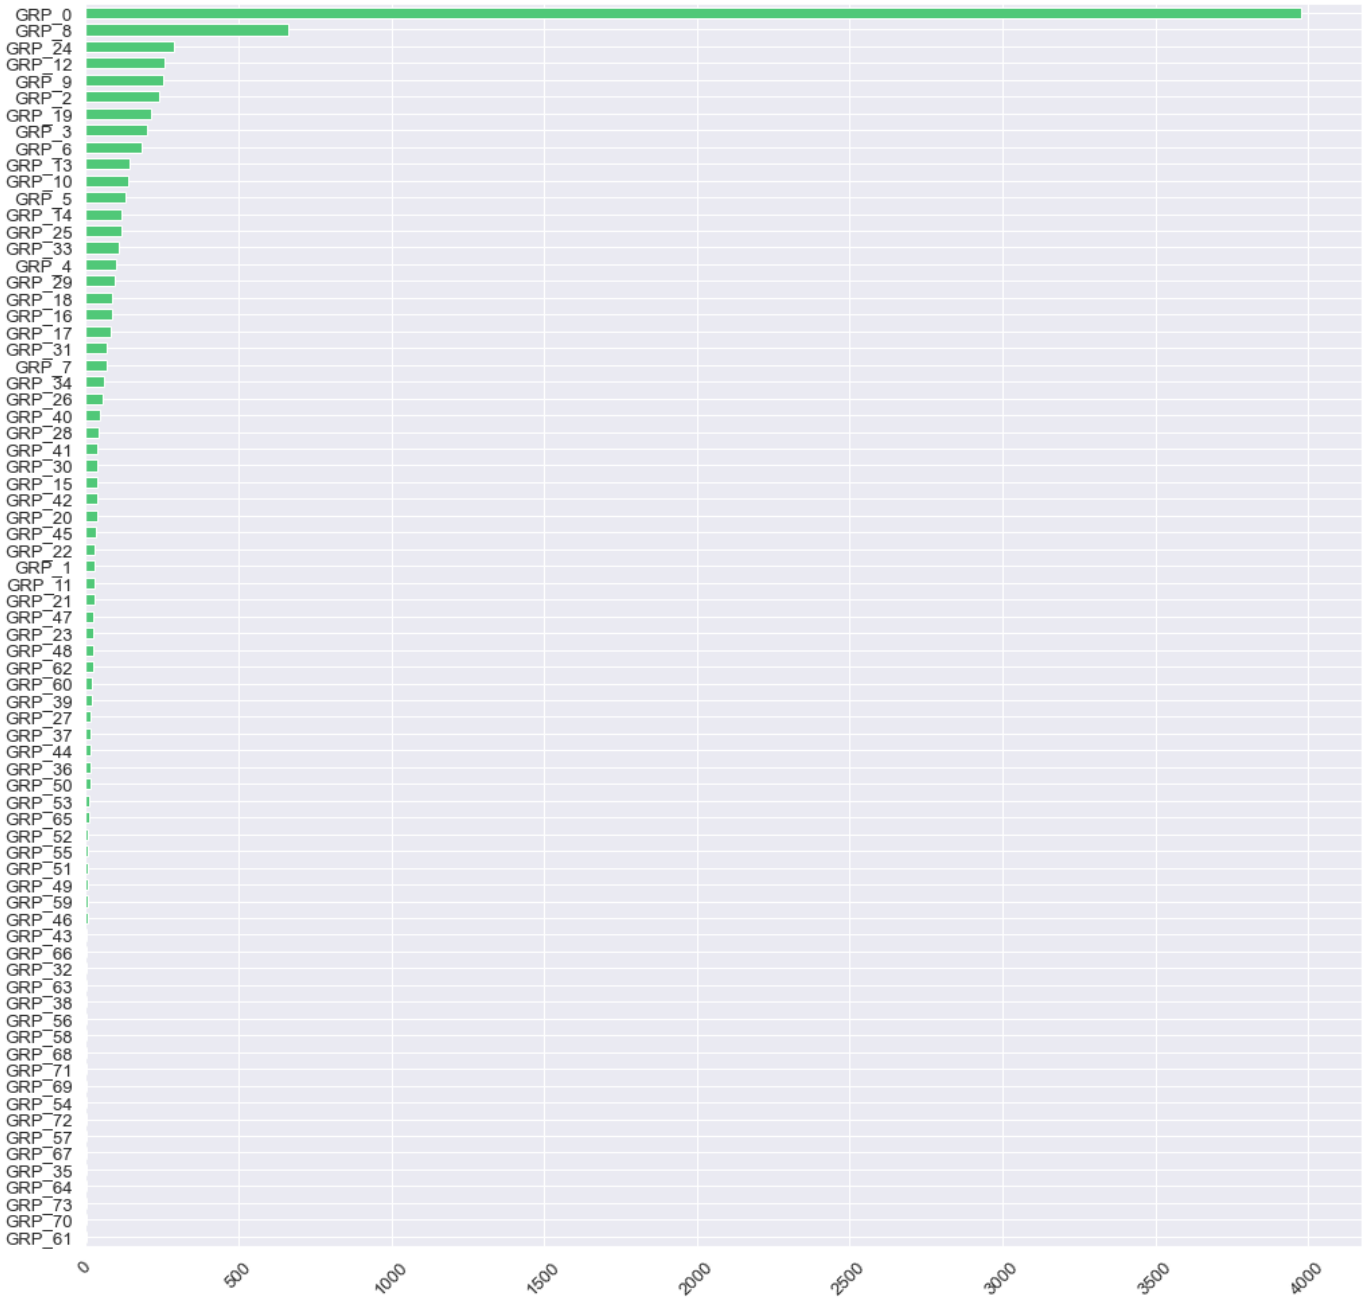
- ## Target Class Distribution

In [19]:
```
sns.set(font_scale=1.2)  # scale up font size
dataset.group.value_counts().sort_values(ascending=True).plot(kind='barh', width=0.65, figsize=
plt.xticks(rotation=45)
plt.show()
```



In [20]:
```
dataset.group.value_counts().sort_values(ascending=False).tail(30)  # few classes with only sir
```

Out[20]:

GRP_44	15
GRP_36	15
GRP_50	14
GRP_53	11
GRP_65	11
GRP_52	9
GRP_55	8
GRP_51	8
GRP_49	6
GRP_59	6
GRP_46	6
GRP_43	5
GRP_66	4
GRP_32	4
GRP_63	3
GRP_38	3
GRP_56	3
GRP_58	3
GRP_68	3
GRP_71	2
GRP_69	2
GRP_54	2
GRP_72	2
GRP_57	2
GRP_67	1
GRP_35	1
GRP_64	1

```
GRP_73     1
GRP_70     1
GRP_61     1
Name: group, dtype: int64
```

In [21]:
```
dataset[dataset.group == 'GRP_70']  # small groups have to merged into a separate "Others" cate
dataset[dataset.group == 'GRP_70'].description.tolist()[0]
```

Out[21]:
```
'an e-mail from  it training has email hints and tips #1.  under "create signature" it has a li
nk "company formatheywting standard" that i am forbidden to see.\n615'
```

- The target class distribution is heavily imbalanced as most calls are assinged to Group 0 and exluding this as well, we find an imabalanced dataset for the rest of the groups.

In [22]:
```
temp = dataset.copy(deep=True)
temp.loc[temp["group"] != 'GRP_0', 'group'] = 'Other'
temp.loc[temp["group"] == 'GRP_0', "group"] = 'Group 0'
```

In [23]:
```
temp.group.value_counts()
```

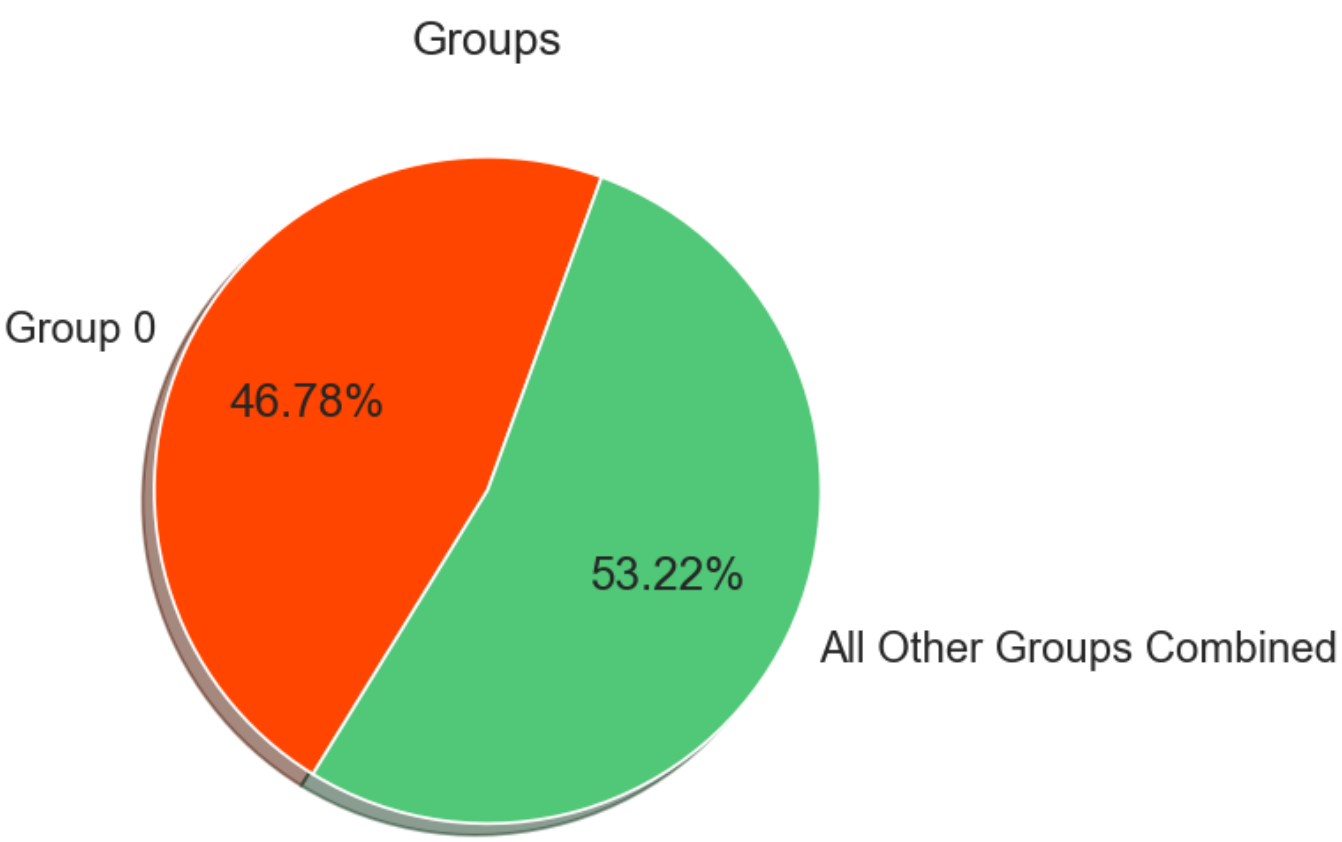
Out[23]:
```
Other      4524
Group 0    3976
Name: group, dtype: int64
```

In [24]:
```
sns.set(font_scale=1.25)  # scale up font size

plt.figure(figsize=(5, 5), dpi=125)
group_0 = len(temp[temp['group'] == 'Group 0'])
others = len(temp[temp['group'] == 'Other'])

plt.pie(x=[group_0, others],
        explode=(0, 0),
        labels=['Group 0', 'All Other Groups Combined'],
        autopct='%1.2f%%',
        shadow=True,
        startangle=70,
        colors=['#FF4500', '#50C878'])

fig = plt.gcf()
fig.set_size_inches(5, 5)
plt.title('Groups')
plt.show()
```



- ## Choosing a Metric to benchmark model performance

- This is a multi-class classification problem, where the machine learning model will try to predict if each row is one of the 74 possibilities.
- The majority class is GRP_0, which occurs in 46.78% of the observations.
- The most common metrics for a multi-class classification problem are AUC, F1-score and accuracy.
- Accuracy is not suitable for an imbalanced classification problem. (Note that a model that always predicts GRP_0, will get an accuracy of 46.78%)
- We would choose F1-score if the majority class is more important than the smaller classes.
- We would choose AUC if we also care about the smaller classes.

As we want to be able to classify the tickets into all functional groups and functional groups are given equal importance, we choose AUC as the final metric to score model performance.

- ## Outlier Analysis

In [25]:
```

Pipeline

- fix text encoding usng ftfy.fix_text
- handle other languages (drop or translate) (TODO)
- parse email messages to retain only subject and body
- clean up emails, links, website links, telephone numbers
- clean up anchor words like: 'Received from:', 'name:', 'hello', 'hello team' , 'cid' ...
- clean up security logs (TODO)
- clean up outage questionnaires (TODO)
- clean html tags if they exist
- clean /r /n characters
- strip caller names in descriptions
- translate accented characters (á -> a)
- convert unicode characters to ascii
- expand contractions (they're -> they are)
- clean stopwords & any custom stopwords
- clean up extra whitespaces & tokenize
- remove gibberish (after language translation)
- strip extra punctuation
- lemmatization/stemming (if needed for a model)

TODO: Language Translation

- Conclusion: The best performing model when we consider 3 or 2 unique groups appears to be Random forest based on test accuracy

- **OBJECTIVE:**

Use the text data to build simple feed-forward Neural Nets and benchmark against the base ML models.

Testing Accuracy:  66.80498123168945
```

- **Resultant Metrics:**

Model	Test Accuracy
Simple Feed-Forward Nerual Net	60.40

Feed-Forward NN + Batch Norm	63.43
Feed-Forward NN + Dropout	64.73
Feed-Forward NN + Pre-trained GLoVe embeddings	61.53
LSTM	49.91
Bi-Directional LSTM	65.87
Convolution Blocks (Dimensionality Reduction) + LSTM	54.71
Convolution Blocks (Dimensionality Reduction) + Bi-LSTM	59.87
Tfldf Vectors + Feature Selection + Feed-forward Neural Net	66.80

- **OBJECTIVE:**

Use the text data to build simple feed-forward Neural Nets and benchmark against the base ML models.
